Continuation of 11. does NOT place the application in condition for allowance because: Examiner has fully addressed all limitations in the Final Office Action submitted 1/24/08.

Applicant contends Hadi Salim fails to disclose a "flow rate associated with a plurality of packets entering or exiting a network". Examiner respectfully disagrees, see col 2 lines 57-63, col 3 lines 33-37 flow rate is determined by means of a packet flow control parameter to control the flow of packets from a source to destiantion. Node congestion and ultimate determination to see how many packets may be accepted or transferred is also a form of "flow rate" which either increases or decreases based on specific node thresholds.

Further applicant contends "marking at least one predetermined bit in at least one of the plurality of packets if the flow rate is greater than a predetermined rate,". Examiner disagreessee see Fig. 3, col 5 line 65- col 6 line 15, a CE bit is marked as a predetermined bit based on congestion status, further "flags" or predetermined bits that are marked are measured to see if the flow of packets exceeds a threshold and rate is adjusted accordingly, col 1 lines 44-59.

Applicant further contends "that nowhere does Hadi Salim disclose, or even suggest, allocating a share of the capacity is a disclosure of "a predetermined rate,". This contention is most as it is not in the claims of question.

Examiner once again asserts that all limitations are taught within the cited references and therefore the rejection to claims 1-11 and 14-19 is sustained.
